

Tumbling tower

Before starting the game:

Build up the tower by placing rows of 3 wooden blocks at right angles to each other. Place the tower in the middle of the table.

Course of the game:

The player to start has to remove one block from anywhere below the highest complete storey and start it on top of the tower, at right angles to the blocks immediately below it. You may use only one hand at a time. Continue play clockwise, moving one block at a time. Always complete a full-3- block storey before starting another.

How the game ends:

The last player who succeeds in moving block without making the tower tumble wins. The player who made the tower fall is the loser. He has to set up the tower for the next game.
