

# Solitaire

Solitaire is a classic puzzle game for one player.

## **Before starting the game:**

It is played with a board containing 33 holes. The game begins with all holes except one containing a marble. The standard game fills the entire board with marbles except for the central hole. The solution for playing the game this way will be described later on

## **Course of play:**

A move is affected by one marble jumping horizontally or vertically over an adjacent one into a vacant hole beyond. The "jumped" marble will be removed from the board. The game is over when no more jumps are possible.

**Aim of the game is to remove all the marbles except one from the board. A perfect game would leave one marble in the centre position.**
